

Managed LAN and WiFi

Allowing a professional organisation such as QDOS Communications to manage your local area network (LAN) and WiFi means you are placing your IT infrastructure in safe hands. With a wealth of experience in managed Network solutions and a 24/7 x 365 support desk, we are highly skilled and available round the clock to keep your business running.

What is LAN?

A local area network (LAN) is a group of computers and associated devices that share a communications line or wireless link to a server. Typically, a LAN encompasses computers and peripherals connected to a server within an area such as a hotel or a restaurant, it can serve as few as two or three users or several hundred. Computers and other mobile devices use a LAN connection to share resources such as a printer or network storage.

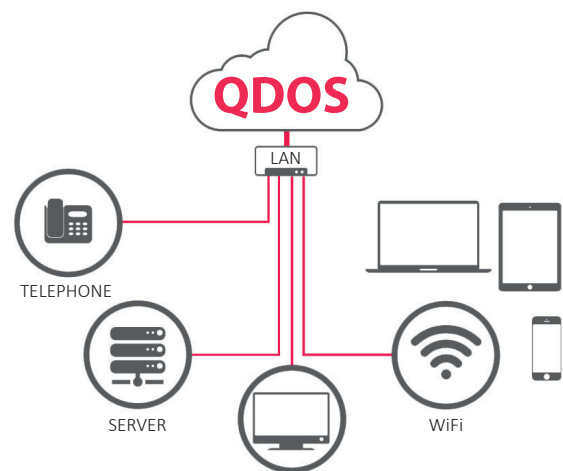

Why choose a managed LAN & WiFi service?

Allowing us to design, deploy and manage your LAN and WiFi means that we can work proactively; fixing faults and ensuring that your Network is always running at full capacity and as smoothly as possible.

Passing this over to us means that your IT team can focus on developing front-end applications and improving business processes. It also decreases the need for additional recruitment in order to support your team, which in turn decreases business costs. This is what we are experts at – wouldn't you want your infrastructure maintained by the very best?

Benefits

- Choosing QDOS to manage your LAN and WiFi allows your business to alleviate the stress of managing this internally, and can also assist in cost saving.
- 24/7 x 365 support desk proactively monitoring your Network meaning you can concentrate on running your business not your network
- Provides a truly mobile solution to your office users allowing them to connect securely and quickly, thus improving efficiency and productivity.

Features
